

SLIDING RANGE

Effortless Strength

At YOKOR WINDOWS, we believe in effortless luxury. Our sliding systems are engineered around the “one-finger operation” principle: delivering one of the smoothest, most seamless sliding experiences in the industry, even on oversized panels.

From minimalist sightlines to expansive glazed spans, YOKOR SLIDING RANGE balances architectural vision with technical reliability — delivering refined solutions across residential and commercial projects.

Each system is custom-made to meet exact project requirements, enabling a true zero-threshold design that merges indoors and out seamlessly. With industry-leading sealing performance and reinforced structural profiles, all of YOKOR's sliding systems offer smooth, sustained movement and robust structural performance — capable of withstanding harsh weather, high wind pressure, and extreme structural demands.
